

Assignment 1

- **Write a unix one line command which can accomplish the following**
 - Search a *.tar file (say which is named 'deleteme.tar') in a directory in your home (tip: use the find command)
 - Unarchive the contents
 - Remove/delete all the files after unarchiving it.
- **Develop an automated script for downloading all the bacterial genomic sequences from ncbi ftp site (ftp://ftp.ncbi.nih.gov/genbank or ftp://bio-mirror.net/biomirror/genbank/) by traversing to the directory /genbank/genomes/Bacteria**
